

ABSTRACT OF THE DISCLOSURE

The invention is to provide an information  
processing apparatus capable of easily setting  
operation parameters in acquiring various status from  
5 the plural peripheral apparatus, and a method  
therefor. In an image for setting the time-out value  
for a protocol for acquiring the status of the  
peripheral apparatus on the network, a change by the  
user on a time-out value for all the status  
10 acquisition from the peripheral apparatus is reflected  
on the time-out values for acquisitions of various  
statuses.
